National Training Programmes in “Dairy Animal Practice”

With the knowledge of animal health and veterinary care growing each year at a phenomenal rate, there has been an increase in availability of advanced diagnostic, life support and therapeutic services for all kind of animals. With the advancements in veterinary and animal health care technology and the help of dedicated owners and their referring veterinarians, animal patients can enjoy a high quality of life for many years, which leads to enhanced animal productivity. Farmers nowadays are much aware of the various animal diseases and their management strategies. Armed with such knowledge they demand state of the art diagnostic and treatment facilities and advanced patient care for their dairy animals.

Growing number of dairy animal patient populations with digestive, cardio-vascular, respiratory, renal, endocrine, neurological, dermatological and production disorders necessitate advanced knowledge and skills towards management of such disorders. This necessitates regular updating of clinical skills in the field of dairy animal medicine for advancement of quality animal patient care. Towards this goal and based on the clinical resources and materials available at this Centre, it has been planned to give knowledge and skills update to field veterinarians of state & central services and for the veterinarians from dairy co-operative federations in various states of India

Institution

The Madras Veterinary College is an institute of international eminence in India, with more than 100 years of Excellence in veterinary medicine and allied Sciences. It serves as a Centre of excellence in India in the field of clinical veterinary medicine. The other features include
