

MODEL VEGETABLE GARDEN UNIT

In order to promote roof top vegetable garden in urban areas, a model vegetable garden unit has been established for demonstration to the farmers.

Roof gardens are most often found in urban environments. Available gardening areas in cities are often seriously lacking, which is likely the key impetus for many roof gardens. The garden may be on the roof of an autonomous building which takes care of its own water and waste. Plantings in containers are used extensively in roof top gardens.

At Mecheri Sheep Research Station, Pottaneri, the vegetable plants are kept in specific pots for demonstration as well as vegetable production. The plants kept in model vegetable garden at this station are as follows:

Sl. No	Plant name
1	Tomato
2	Brinjal
3	Radish
4	Chillies
5	Pasalai Keerai
6	<u>Sirukeerai</u>

Plantation in containers
